

**REMARKS**

This application is a continuation of allowed U.S. patent application serial no. 07/971,857 (the '857 application).

The foregoing amendments to the specification correspond to amendments made in the parent of the present application. The amendments were made to reflect changes in numbering of the figures made in response to the Official Draftsperson's requirement of the parent application that certain figures be renumbered. The amendments are believed to add no new matter.

The substitute specification submitted herewith is the same substitute specification filed in response to the Examiner's request to do so during prosecution of the '857 application. The substitute specification adds no new matter.

The applicants believe the application is in condition for allowance and early notification thereof is solicited.

Respectfully submitted,

MARSHALL, O'TOOLE, GERSTEIN,  
MURRAY & BORUN
